**Just for
Honeypuffers!**

THE QUALITY SMOKING GOODS

ABOUT US

HONEYPUFF, a young fashion smoking accessory brand from the United States!

RASTA - Jamaican fashion that the retro world is all chasing!

Since the 1950s, Jamaican boys who loved cigarettes and music have integrated music from R&B in the United States, SKA in Jamaica, and JAZZ in the Americas, evolving into REGGAE music. They promoted love peace, happiness, and freedom through music. The iconic elements of REGGAE included high saturation red, yellow, green colors, and marijuana leaf patterns. Nowadays, this fashion has spread to the world.

We combine cigarettes with elements such as culture, fashion, and trends through our original brand art design, which also opens up more possibilities for previously single attribute tobacco.

We optimize our products and enhance your smoking experience by listening to and understanding the personal experiences and feedback of every consumer.

All product development at **HONEYPUFF** is done by designers who truly understand the tobacco preferences of smokers.

PAPER+TIPS

HONEYPUFF flavored rolling papers adopts a special process to directly blend natural flavors and sweeteners into the roll paper, rather than simply printing or spraying on the surface of the paper, thereby enhancing the natural flavor and smoothness of tobacco from the inside out. We also use innovative pure aluminum packaging bags to seal and preserve your rolling papers flavor, making it more long-lasting. The rolled cigarettes can also be stored in the bags, which can have a moisturizing effect.

We have produced various flavors, including honey, watermelon, strawberry, coconut, banana, chocolate, vanilla, menthol, cherry, blueberry, and more. And we are constantly developing more flavors. To meet your needs.

Please start your honey roll!

NANO CRYSTALLINE FILTERS

THE WORLD'S FIRST NANO CRYSTALLING FILTERS

Experimental proof The adsorption effect of nano crystalline on toxic gases is more than 50% better than that of ordinary activated carbon.

**REDUCE TAR INTAKE
EVERY PUFF TASTES COOL, SOFT AND DRY**

Dual filtration function

Overheated smoke and/or too cold filters will cause condensation instead of filtration and may clog the filter, therefore, we use a dual filter device of natural plant fiber and nano crystalline. Nano crystalline can not only filter harmful substances, but also reduce the temperature of smoke. The plant fibers at both ends can not only filter pollutants and reduce dust inhalation, but also absorb condensation water caused by smoking, even in cold weather.

Environmentally friendly and sustainable production

Printing uses natural non-gmo soy ink, both paper tubes and nano crystalline are made of natural and environmentally friendly materials.

2-WAY HUMIDITY CONTROL BAG

INSERT PACK

SEAL CONTAINER

WAIT 24-72 HOURS

Each HONEYPUFF terpene moisturizing bag contains our unique bi-directional humidity control formula and a natural plant-based terpene isolate. Put your herbal products into a bag for 24-72 hours to add specific aromas and flavors to your herbal products, while our two-way humidity control technology can maintain the freshness, efficacy, and integrity of the herbal products throughout the entire process.

DURABILITY

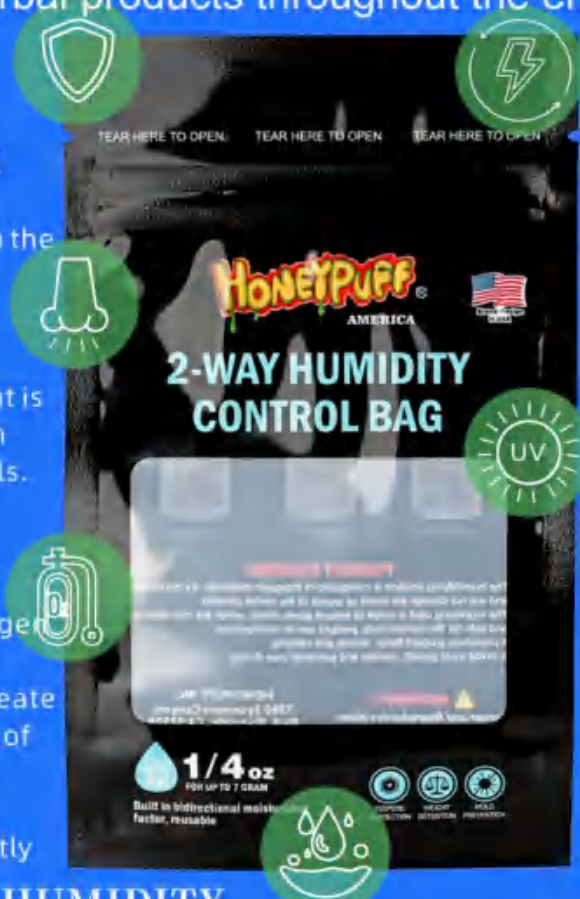

An element of Industrial Resistance is added for a maximum resistance to the Perforation.

ODOR

This high barrier element is added to offer maximum protection against smells.

OXYGEN

This element allows oxygen to be diffused out of the packaging in order to create and maintain low levels of oxygen. This limits the oxidation of terpenes, cannabinoids, and greatly reduces weight loss.

HUMIDITY

This element works with the oxygen layer to ensure moisture control. Low oxygen levels slow down the breathing process, then excess water vapor that has accumulated in the free space of the packaging is diffused through the packaging to prevent mold growth and create optimal moisture levels.

ANTISTATIC

An added element to create a neutral load on the side wall of our packaging. This prevents the packaging from removing trichomes from your product that contain 90% of the terpenes in the flower.

UV

The UV element combined with the opacity of the packaging provides superior protection against harmful UV rays. Light rapidly breaks down organic matter and is one of the main factors that cause the breakdown of THC into CBN.

A collection of Honey Puff products is displayed on a wooden table. In the center is a large yellow gift box with a cartoon character and various product illustrations. Surrounding it are several smaller boxes and packs: 'Honey Puff Authentic Pre-Rolled Tips', 'Honey Puff POP! 3', 'Honey Puff Organic Wrap Blueberry', 'Honey Puff Banana Flavored Rolling Papers', 'Honey Puff Cones Green', and 'Honey Puff Green Apple Flavored Rolling Papers'. A red wax seal is also visible. To the left is a white cup of coffee on a saucer, and to the right is a brass desk lamp. The scene is lit with warm, natural light from a window in the background.
